

MIVANOR
WASTEWATER TREATMENT

MivaMag™ Mobile

PRODUCT DATA SHEET

MivaMag Mobile system

The MivaMag system can be installed in 20' High Cube ISO containers with side opening, in applications where a mobile solution is required. The containers are assembled at site.

The MivaMag Mobile solution has 2 containers placed next to each other, joined at the middle. They house the complete MivaMag system and treatment chemicals.

The layout of the modules provides ease of access for loading and unloading of the sludge container and the treatment chemicals, and only requires access from 2 sides.

The containers are delivered with internal insulation, and heating is provided by heating fans inside.
